

DTMF CODES and REFERENCE INFORMATION

**North Carolina Medical
Communication Networks
NCMCN and VMN**

Office of Emergency Medical Services

Division of Health Service Regulation

North Carolina Department of Health and Human Services

The North Carolina Medical Communications Network (NCMCN) and VIPER Medical Network (NCVMN)

Introduction

Following is a description of the two state operated primary medical radio systems in North Carolina. These are called the UHF NC “Medical Communications Network” (MCN); and, the 800 MHz NC “VIPER Medical Network” (VMN). Generic information regarding the developing North Carolina VIPER (Voice Interoperability Plan for Emergency Responders) radio network is also included. The descriptions provide direction for the developing the statewide medical radio systems. Note that this information is preliminary and subject to change as the systems continue to evolve. This information is current as of December 2007.

System 1 - UHF North Carolina Medical Communications Network (NCMCN)

The North Carolina Medical Communication Network (MCN) is the state’s ultra high frequency (UHF) medical radio system. Control station radios are installed in virtually all hospitals in the state. The MCN system provides backup redundant and disaster communications for hospitals, EMS and special medical response services in the state. Radio repeaters are operational at 36 radio sites that provide approximately 95% geographic “talk-out” coverage to the state. This radio network shares the towers and microwave facilities of the University of North Carolina television network and the State Highway Patrol. The MCN functions in addition to the older state VHF 155.340 MHz (340) hospital radio system, which is also installed in all hospitals. The “340” system provides “local” ambulance to hospital communication, while the MCN can provide statewide coverage. The MCN system does not rely on terrestrial wires for operation, making it resistant to overload from public telephone calls or outages due to downed telephone lines or power lines. All repeater sites are connected to emergency electrical generators.

The design of the UHF MCN MED system also has provision for development of “local” county medical UHF radio system installations to aid counties or hospitals that have requirements to implement UHF communications systems. The MCN provides established statewide “compatibility standards” for implementing equipment on the medical radio network. These compatibility standards provide standard channel names and usage recommendations, tone designations, frequency, modulation and signaling standards which are necessary for compatible or “interoperable” emergency communication.

Each of the MCN radio sites has two UHF radio repeaters installed. These provide redundancy and two separate radio channels for emergency medical communication. The repeaters operate on UHF channel MED-8 and MED-10. MED-10 is the primary calling and network control channel, while MED-8 is for patient care and other medical communication. There are a total of ten MED channels designated by the Federal Communications Commission (FCC) for medical communication. The ten MED channels are designated nationwide for medical communications and are shared between all users of the UHF MED channels. In the future, narrow banding requirements of the FCC will add additional channel capacity.

Each of the MED-8 and MED-10 repeaters is connected by microwave radio to the State Emergency Operations Center (EOC) in Raleigh. The radios are also connect by a computer switch to enable the repeaters to be linked together. All communication over the MCN is continuously recorded on a logging recorder and the sites are monitored by computer IP and radio test systems. These provide remote sensing

of the RF power, radio receiver activity, cabinet temperature and intrusion alarm status at each of the radio sites.

There are two communication operator control consoles integrated with the MCN network. The communication consoles provide manned operator control of the network from the state EOC and from the State Office of Emergency Medical Services in Raleigh.

The MCN UHF systems can additionally be linked with the NC 800 MHz trunked “VIPER” radio system. This enables MCN UHF users to cross-band operate with the “VIPER” 800 MHz systems during disaster situations. While this operation possible, it is intended only as a back up or “gateway operation” until more users obtain 800 MHz VIPER radio equipment.

There are over 250 control stations now operating within the UHF MCN. These include all hospitals with emergency departments, all primary community health centers, the state poison control center, the state bio laboratories and many of the state’s Public Safety Answering Points (PSAPs), 9-1-1 centers and county EOCs. 86 public health departments also have “pack carried” radios that provide MCN operation. Listing of the control station location, call signs and access codes are published in the document

DTMF CODES AND REFERENCE INFORMATION

available from the web site: <http://www.ncdhhs.gov/dhsr/EMS/pdf/dtmfref.pdf>

System 2 – 800 MHz

North Carolina VIPER Medical Network (NCVMN)

North Carolina is implementing a second additional statewide medical radio system. This is an 800 MHz medical radio system referred to as the “Viper Medical Network” or VMN. This system is within the 800 MHz state trunked VIPER radio network “Voice Interoperability Plan for Emergency Responders.” The VMN establishes a digital talk group for each hospital, military hospital, veteran’s hospital, mobile hospital and community health center within the state. Provisions are included for the bio laboratories, poison center and the state medical assistance teams. When radio equipment is deployed for the VMN, any hospital, ambulance or field medical service unit anywhere in the state will be able to communicate throughout the system and across the entire state.

For interoperability compatibility, every radio that functions as part of the VMN must have a common group of channels with standard channel names. The VMN radios must therefore be equipped with a series of “Talk Groups,” which are similar to channels in a conventional or “legacy” radio.

The standardized Talk Groups for the VMN radios are set up in seven classifications:

1. Statewide Medical Talk Groups
2. Statewide Calling Talk Groups
3. Statewide Event Talk Groups
4. State Highway SHP Common and Mutual Aid Talk Groups
5. North Carolina Emergency Management Approved Talk Groups
6. Statewide Roamer Talk Groups
7. Statewide General Pool Talk Groups

STATEWIDE MEDICAL VMN TALK GROUPS

Following is a description of the purpose and suggested operation for each of the classifications of VIPER Statewide Channels:

The Viper Medical Network provides a talk group “channel” for each hospital in the state thus enabling VMN VIPER users the ability to contact hospitals for medical or patient care communication from anywhere in the state.

There are 185 statewide digital Viper Medical (VM) talk groups. Each of the hospital talk groups are identified by a 5-digit numeric address. The 5-digit hospital addresses are grouped into twelve radio zones or banks identified as the “VM” talk groups. These zones are established so the channels can be installed in mobile or portable radios, as well as hospital control stations.

The hospital talk groups are identified by three ZONE characters such as “VMA,” “VMB,” “VMC,” “VMD,” “VME,” etc. ... through to “VML.” Within each of these twelve VM zones there are sixteen numeric 5-digit addresses which correspond to each hospital in the state. Each hospital has a pre-designated VM address which a hospital obtain by authorization when it installs a VIPER medical control radio. The authorization application form is included in the DTMF Reference document available from the web site listed below. The hospital VMN address becomes operational and will be listed in the hospital radio directory upon application. Active VM hospital addresses are listed the DTMF directory, similar to a telephone book, which is available from the Department of Health Service Regulation web site at:

<http://www.ncdhhs.gov/dhsr/EMS/pdf/dtmfref.pdf>

Additional information about the Medical Communications systems is available from:

<http://www.ncdhhs.gov/dhsr/EMS/technolg.shtml>

All VM mobile, portable and hospital control radios must have all of the VM talk group list programmed into the radio to insure operational compatibility when future hospitals are implemented. A VM hospital address can be obtained by submitting the VIPER MEDICAL NETWORK APPLICATION, which is included within the above noted publications.

STATEWIDE CALLING TALK GROUPS

The VIPER Statewide Calling Talk Groups allow VIPER radio users to make contact with the 9-1-1 Center or Public Safety Answering Point (PSAP) in properly equipped counties across the state. This enables any VIPER radio to contact either their home 9-1-1 Center when they are out of their home county or to contact the 9-1-1 Center in the county that they may be in at the time assistance is needed. Contact can be established by installing a station to monitor these talk groups.

There are FIVE Statewide Calling Talk Groups located within the radio in the zone identified as “SW”. These are listed below with the standard channel name used for programming:

1. Statewide CallSW CALL
2. Statewide Law.....SW LAW
3. Statewide FireSW FIRE
4. Statewide EMSSW EMS
5. Statewide General GovernmentSW GEN

NOTE:

The Five Statewide Calling Talk Groups are ONLY FOR CALLING PURPOSES. Use of these talk groups should not be confused with the function of conventional, legacy channels in other frequency bands such as

STATE FIRE (154.280) or STATE EMS/RESCUE (155.280), which can be used for on scene operational use.

Each properly equipped county 9-1-1 center will have a control station set to monitor the Statewide Call (SW CALL) talk group at all times. The Statewide Call (SW CALL) talk group is essentially a large party line, similar in operation to the old “Inter-City” channel used between 9-1-1 centers. One of the most significant differences with the Statewide Call (SW CALL) talk group is that it allows VIPER users with mobile and portable radios to communicate with the 9-1-1 Centers statewide. The Statewide Law, Fire, EMS and General Government talk groups are to be after communications with the center has been established and the VIPER user is switched to the appropriate talk group.

If a VIPER user with either a mobile or portable radio needs to contact a 9-1-1 center using the Statewide Call (SW CALL) talk group, the following procedure should be followed:

- Adjust the radio to the “SW CALL” talk group.
- Give the name of the county 9-1-1 center that you are calling.
- Give your agency name and unit identifier, followed by the words “on Statewide Call.”
- For example: **“Carteret County 9-1-1, this is Wake County Sheriff Unit 301 calling on Statewide Call”**

This provides three important pieces of information:

1. **The name of the County 9-1-1 Center that you are calling.**
2. **Your Agency name, Unit number and Discipline, e.g. Law Enforcement, Fire, EMS, EM, etc.**
3. **The Channel that you are calling the 9-1-1 Center on, e.g. Statewide Call**

When the contacted 9-1-1 Center receives a call from a VIPER user, based on the information provided in the contact message, a determination will be made as to which of the four discipline specific Statewide Calling Talk Groups should be used for further the conversation. For example, if the calling user was a Sheriff or Police agency, then the 9-1-1 Center would recommend to the VIPER user that they move to Statewide Law (SW LAW) to continue the radio communications with that center. An example of this would be:

- The 9-1-1 Center would respond to the calling VIPER user:
**“Wake County Sheriff Unit 311, this is Carteret County 9-1-1,
switch to Statewide Law”**

This accomplishes three important things:

1. It provides calling VIPER user with clear direction about what channel they need to change to so that they can relay their request to the 9-1-1 center;
2. It removes the conversation between the 9-1-1 center and the calling VIPER user from the Statewide Call (SW CALL) talk group so that the “party line” is clear for further radio communications statewide; and,
3. Allows the 9-1-1 Center and the calling VIPER user to communicate on the discipline specific channel their request.

Once the communication between both the 9-1-1 Center and the VIPER user is complete, then the 9-1-1 Center would return its control station to the Statewide Call talk group, ready for future contacts and the calling VIPER user would return to the channel that they were operating on prior to initiating the Statewide Call.

STATEWIDE EVENT TALK GROUPS

The VIPER Statewide Event Talk Groups are not assigned to any specific agency. They provide all VIPER users sixteen (16) statewide talk groups which can be directed in the event of a multi-agency response that exceeds the scope of a normal occurrence or covers a larger than normal geographic area. In the future it is anticipated that a centralized State operated communications center will serve as the clearinghouse for assignment of these talk groups based upon location and need. The Statewide Event Talk Groups are in a zone or bank in the radio identified as “EVENT” or “EVT”. They have the standardized channel naming listed below:

- | | |
|------------|--------------|
| 1. Alpha 1 | 9. Charly 1 |
| 2. Alpha 2 | 10. Charly 2 |
| 3. Alpha 3 | 11. Charly 3 |
| 4. Alpha 4 | 12. Charly 4 |
| 5. Bravo 1 | 13. Delta 1 |
| 6. Bravo 2 | 14. Delta 2 |
| 7. Bravo 3 | 15. Delta 3 |
| 8. Bravo 4 | 16. Delta 4 |

STATEWIDE HIGHWAY PATROL MUTUAL AID TALK GROUPS

The VIPER Statewide Highway Patrol Mutual Aid Talk Groups serve as a means for all VIPER users to have the ability to contact one of the State Highway Patrol’s eight (8) communications centers. They also allow VIPER users monitoring one of the eight (8) Troop Mutual Aid talk groups to hear emergency messages, referred to by the SHP as “Signal 25” broadcasts. There are eight (8) SHP Troop Mutual Aid talk groups authorized for all VIPER users. They have the standardized channel naming listed below:

- Troop A Mutual Aid (Williamston) TRPA MAID
- Troop B Mutual Aid (Elizabethtown) TRPB MAID
- Troop C Mutual Aid (Raleigh) TRPC MAID
- Troop D Mutual Aid (Greensboro) TRPD MAID
- Troop E Mutual Aid (Salisbury) TRPE MAID
- Troop F Mutual Aid (Newton) TRPF MAID
- Troop G Mutual Aid (Asheville) TRPG MAID
- Troop H Mutual Aid (Monroe) TRPH MAID

In addition to the SHP Mutual Aid Talk Groups, there are eight (8) Troop Common Talk Groups designed to be utilized to communicate directly with a State Trooper without disrupting the SHP’s operation on its respective Troop and District Dispatch Talk Group. These same talk groups are used to provide “Car to Car” communications between SHP personnel. The talk groups are listed below with their standardized channel naming: These talk groups are not commonly available to all VIPER users.

- Troop A Common 2 TRPA COM2
- Troop B Common 2 TRPB COM2
- Troop C Common 2 TRPC COM2
- Troop D Common 2 TRPD COM2
- Troop E Common 2 TRPE COM2
- Troop F Common 2 TRPF COM2
- Troop G Common 2 TRPG COM2
- Troop H Common 2 TRPH COM2

NC EMERGENCY MANAGEMENT (NCEM) TALK GROUPS

North Carolina Emergency Management (NCEM) has authorized certain talk groups to be provided to local emergency officials to facilitate coordination between state emergency management staff, the State Emergency Operations Center (EOC) and local agencies. These four talk groups are to be used primarily by local emergency management representatives, however they may be used on a secondary basis by any duly authorized representative of any federal, state or local emergency response agency for the same purpose: The NCEM talk groups are listed below along with their standardized channel naming:

- NCEM Eastern Branch Office StaffNCEM-EBO
- NCEM Central Branch Office StaffNCEM-CBO
- NCEM Western Branch Office StaffNCEM-WBO
- NCEM State Emergency Operations Center (EOC)NCEM-EOC

STATEWIDE ROAMER TALK GROUPS

Eight (8) statewide roamer talk groups have been established for the purpose of providing all agencies utilizing VIPER, either as a day-to-day user or as an inter-operability user, with a series of talk groups that may be used for communication with VIPER users that may be traveling outside of their home geographic area but do not require dedicated means of communications with their units. An example would be an ambulance on an out of county transport that desires to contact their home county with routine radio traffic concerning their unit status, destination and availability. These eight (8) talk groups are statewide talk groups but are divided among the four areas of the state corresponding to the VIPER Operational “ZONES”. The roamer talk groups are listed below along with their standardized channel naming:

- VIPER East Roam 1 VEROAM1
- VIPER East Roam 2 VEROAM2

- VIPER Central Roam 1 VCROAM1
- VIPER Central Roam 2 VCROAM2

- VIPER Piedmont Roam 1 VPROAM1
- VIPER Piedmont Roam 2 VPROAM2

- VIPER West Roam 1 VWROAM1
- VIPER West Roam 2 VWROAM2

STATEWIDE GENERAL POOL TALK GROUPS

As a means for any agency using VIPER to have at its disposal a series of “AD HOC” talk groups, eight (8) statewide general pool talk groups have been established for the purpose of providing all agencies utilizing VIPER, either as a day to day user or simply as an inter-operability user, with a series of talk groups that may be used for communication with other VIPER users on an “as needed” basis. These eight (8) talk groups are statewide talk groups but are divided among the four areas of the state corresponding to the VIPER Operational “ZONES”. The general pool talk groups are listed below along with their standardized channel naming:

- VIPER East Pool 1..... VE POOL1
- VIPER East Pool 2..... VE POOL2

- VIPER Central Pool 1..... VC POOL1

- VIPER Central Pool 2..... VC POOL2
- VIPER Piedmont Pool 1 VP POOL1
- VIPER Piedmont Pool 2 VP POOL2
- VIPER West Pool 1 VW POOL1
- VIPER West Pool 2 VW POOL2

**NATIONAL PUBLIC SAFETY PLANNING ADVISORY COMMITTEE
(NPSPAC) TALK GROUPS**

NPSPAC has designated national mutual aid channels to facilitate 800 MHz voice interoperability communications among local, state, and federal public safety agencies. The state currently has only a limited number of base stations or repeaters operating on the NPSPAC channels. Some counties have operational repeaters but in most areas of the state only “talk-around” operation is available for mutual aid communications. This generally limits the range of these channels to “at the incident scene.” There is one calling and four tactical NPSPAC Mutual Aid conventional channels. These have the national standardized channel naming listed below:

- NPSPAC Calling (conventional repeater) 8CALL90
- NPSPAC Calling direct (talk around) 8CALL90D
- NPSPAC tactical (conventional repeater) 8TAC91
- NPSPAC tactical direct (talk around) 8TAC91D
- NPSPAC tactical (conventional repeater)..... 8TAC92
- NPSPAC tactical direct (talk around) 8TAC92D
- NPSPAC tactical (conventional repeater) 8TAC93
- NPSPAC tactical direct (talk around) 8TAC93D
- NPSPAC tactical (conventional repeater) 8TAC94
- NPSPAC tactical direct (talk around) 8TAC94D
