Services

NC Opioid and Prescription Drug
Abuse Advisory Committee
(OPDAAC)

March 6, 2020

Welcome and Introductions of Attendees

Alan Dellapenna, Head, Injury and Violence Prevention Branch, Chronic Disease and Injury Section, Division of Public Health

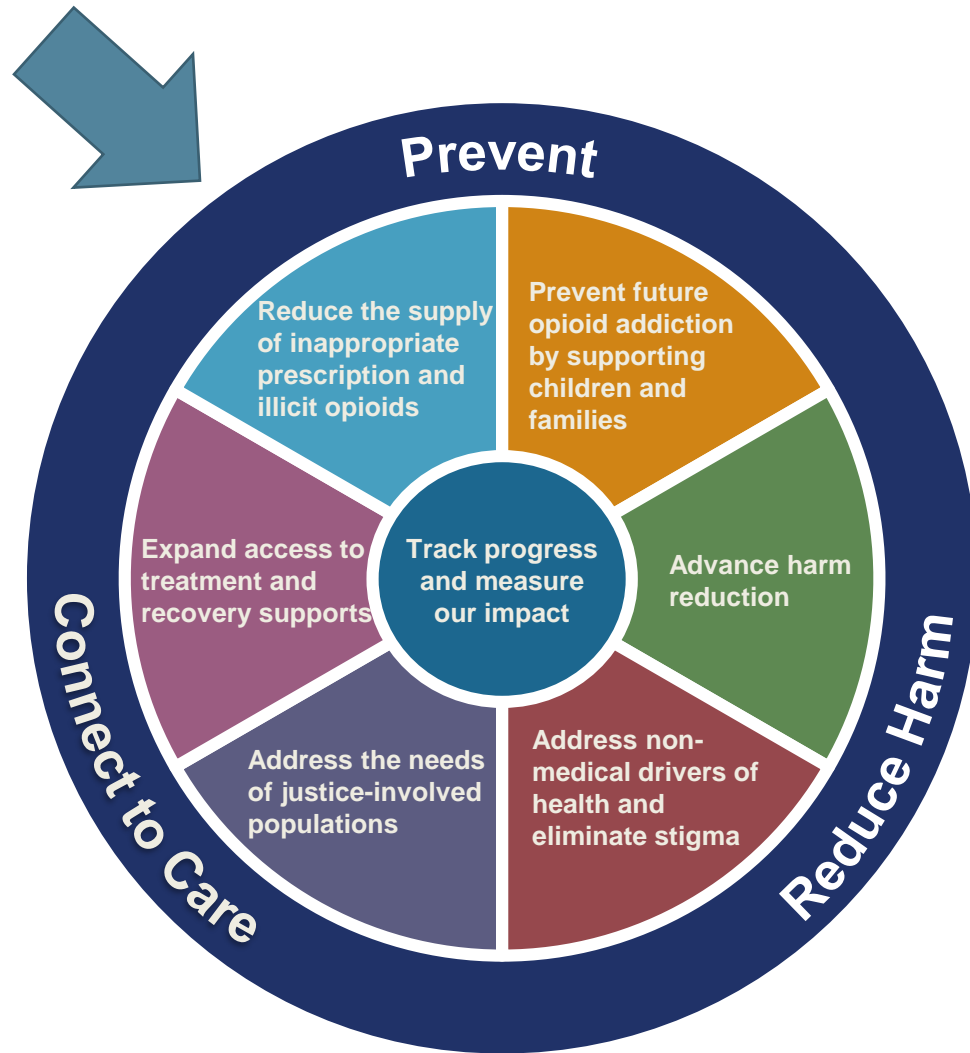

- *Take breaks as needed*

June 2019 Summit Recap Video

Decreased Prescribing: A Look at the Data

Elyse Powell

Opioid Action Plan Version 2.0

Strengthen Opioid Misuse Prevention (STOP) Act

- NC GS 2017-74
- General Assembly passed unanimously by both houses
- Signed by Governor Roy Cooper on June 29, 2017

Opioid dispensing is decreasing

*2021 Q4 expected pills dispensed based on 2013-2016 trend

Source: NC Division of Mental Health, Controlled Substance Reporting System, 2010-2019; 2019 data provisional, data subject to change

Detailed technical notes on all metrics available from NC DHHS; Updated October 2019

Last year, 9% decrease in dispensing

Year	Total Outpatient Opioid Pills Dispensed	Annual Percent Change
2010	442,965,934	-
2011	443,944,526	0.2%
2012	464,243,692	5%
2013	470,383,411	1%
2014	522,566,928	11%
2015	607,719,966	16%
2016	576,010,816	-5%
2017	518,477,614	-10%
2018	442,442,001	-15%
2019	403,451,361	-9%

Source: NC Division of Mental Health, Controlled Substance Reporting System, 2010-2019; 2019 data provisional, data subject to change
Analysis by Injury and Violence Prevention Branch

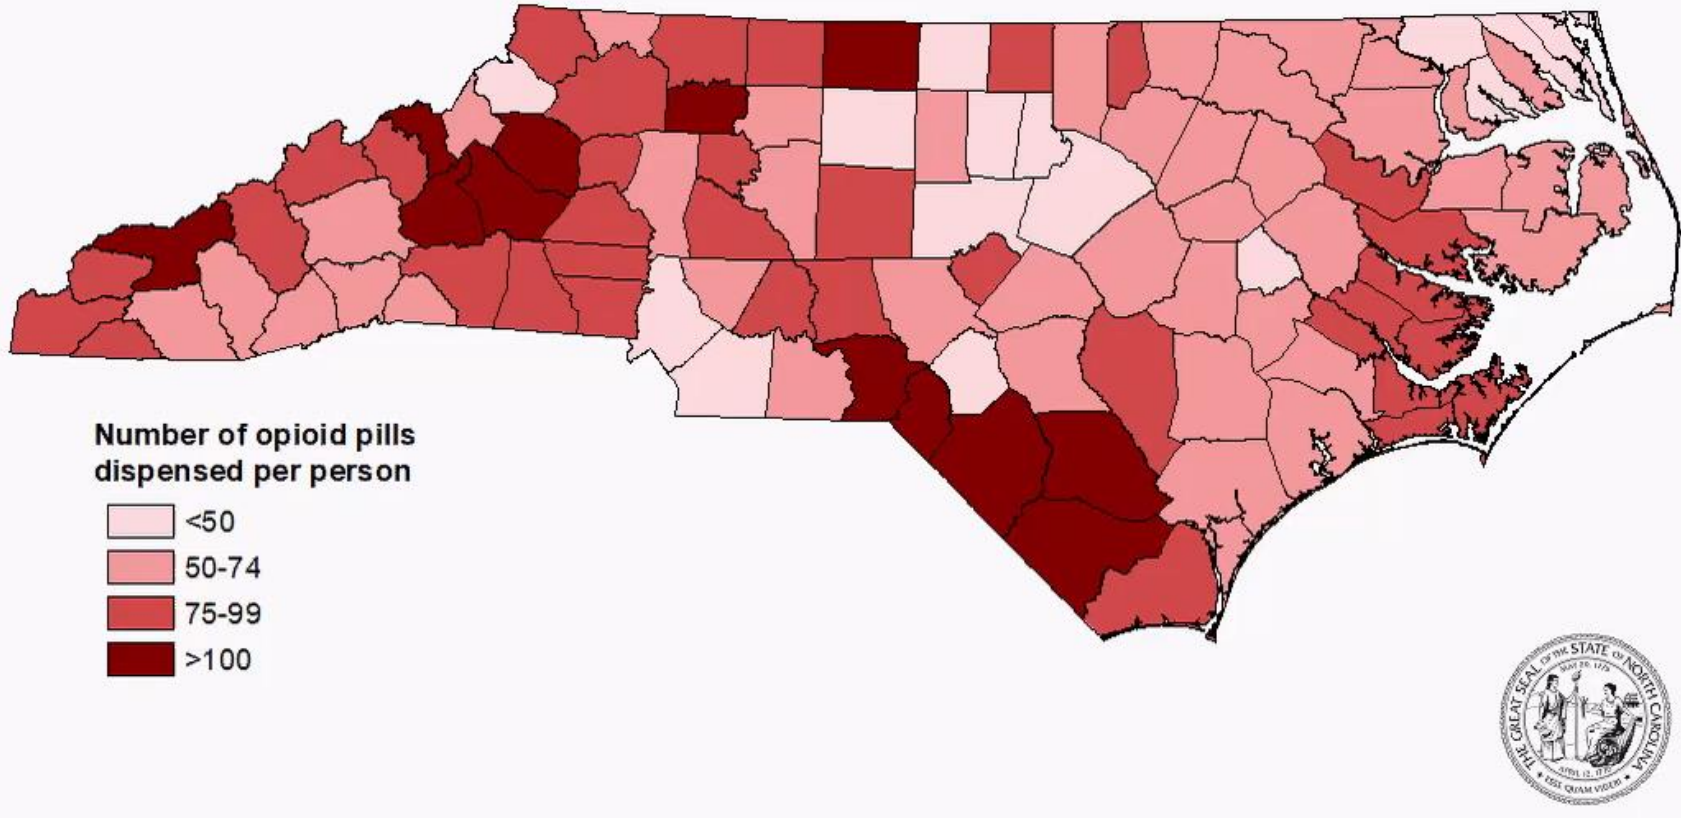

Statewide, pills per resident decreasing

Source: NC Division of Mental Health, Controlled Substance Reporting System, 2010-2019; 2019 data provisional, data subject to change
Analysis by Injury and Violence Prevention Branch

Rate of opioids dispensed varies across counties

Outpatient Opioid Pills Dispensed per Person: 2015

Caring for Patients with Opioid Use Disorder: A Certificate Training for Pharmacists

2020

16 hours ACPE Continuing Education

10 hours online learning

- ✓ Module 1: Epidemiology and Pathophysiology of OUD
- ✓ Module 2: Medications for OUD
- ✓ Module 3: Role of Pharmacists in Recovery
- ✓ Module 4: Pharmacists Models of Care for OUD

4 hours case preparation for LIVE session

2 hours Virtual LIVE Session

**Programming made available to other State
Pharmacy Associations**

A Toolkit for Establishing Clinical Pharmacy Services:

The Feasibility, Implementation, Performance and Sustainability Assessments

A Case Demonstration Employing Chronic Pain Services

Collaborative with Pfizer Pharmaceuticals

- Virtual “toolkit” to help pharmacist “set up” clinical services
- WHY? Competent in providing care but unsure of steps in building the actual business model.
- Provides example using chronic pain services to illustrate step-by step process
- **Coming Fall 2020**

Practice Transformation Opportunities

Opioid Safety at the Pharmacy: Increasing Access to Naloxone

- Partnership with Alliant Health (CMS QIO for NC & GA)
- Purpose: Increase naloxone access and utilization of the NC standing order for Naloxone amongst Medicare beneficiaries
- Objective: Increase opioid risk screening and naloxone dispensing
- Participants: 48 Pharmacies

Opioid Safety at the Pharmacy: Increasing Access to Naloxone

- At Study Endpoint, participating pharmacies:
 - ✓ Used a process to screen and ID patients
 - ✓ Stocked both (IM and Nasal) formulations of naloxone
 - ✓ Promoted naloxone actively and publicly
 - ✓ Avoided stigma and bias in communication and patient counseling
- Engaged pharmacy teams were found to dispensed Naloxone to 65.2 per 1000 high risk Medicare beneficiaries, as compared to the statewide rate of 7.5 per 1000

Harm Reduction Project

2019

- Partnership with the Governor's Institute and the NC Department of Public Health
- One-year harm reduction program for community pharmacists
- Pharmacists completed opioid misuse prevention and harm reduction trainings, with an emphasis on promoting Naloxone and non-discriminatory sale of syringes

GOVERNOR'S
INSTITUTE

NCAP Project Triples Pharmacist Dispensing of Naloxone in Participating Counties

by Alex Watkins | Aug 26, 2019 | Content | 0 comments

Harm Reduction Project

- Participants: 58 pharmacies across 33 counties, including pharmacies in 14 of 15 targeted high burden counties
- At study endpoint
 - 69% of participating pharmacies embraced a non-discriminatory policy for sale of syringes
 - Naloxone dispensing increased 361%, (177 from Jan-Jun 2018 vs. 639 from Jan-Jun 2019)

GOVERNOR'S
INSTITUTE

NCAP Project Triples Pharmacist Dispensing of Naloxone in Participating Counties

by Alex Watkins | Aug 26, 2019 | Content | 0 comments

https://addictionmedicineupdates.org/2019/ncap-project-triples-pharmacist-dispensing-of-naloxone-in-participating-counties/?mc_cid=bfed7d7297&mc_eid=0151c301fb

Practice Transformation Opportunities

Harm Reduction Expansion Project

Extension of 2019 Harm Reduction Project (2 parts)

- Support delivery and sustainability of pharmacist-led interventions
 - *Continued naloxone distribution & non-discriminatory sale of syringes*
 - Improved Screening for High Risk Patients
 - CSRS
 - ORT
 - Use of pain safety agreements
 - Risk-reducing care plans
 - Provider collaboration for patients taking opioids chronically

Harm Reduction Expansion Project

- Establish and implement a MAT Pilot that explores feasibility, utility and value of an advanced collaborative MAT-care model between primary care providers and community pharmacists

Target

- 3 Sites
 - Sona Pharmacy, Asheville NC
 - East Carolinas Medical Center Pharmacy, Benson NC
 - Rx Clinic Pharmacy, Charlotte NC

Practice Transformation for Appropriate and Safe Pain Management

2019

**Breaking the Cycle of Inappropriate Pain Management
One Patient and Family at a Time**

Awardees

- In 2019, NCAP was one of 5 state associations awarded funding from the Cardinal Health Foundation to support a 2-year initiative aimed at Optimizing Prescribing in Pain Management (OPPM).
 - Maryland Pharmacists Association Foundation, Inc.
 - Missouri Pharmacy Foundation
 - Ohio Northern University
 - The North Carolina Association of Pharmacists
 - Wisconsin Pharmacy Foundation

Participation

This initiative expands beyond existing programming and provides pharmacies an opportunity to implement service models that promote staff and patient engagement and facilitates improved and safer pain management

Critical Partnerships

CPESEN[®] Mutual Network of pharmacies & other early adopters of opioid initiatives

*Campbell University School of Pharmacy
High Point University School of Pharmacy
UNC Eshelman School of Pharmacy
Wingate University School of Pharmacy*

2 Components

- Community-pharmacy based opioid stewardship and pain management service
- Opioid stewardship and pain management certificate training for Student-pharmacist, with students completing community or professional in-services on related topics

Core Measures

Use of Opioids at High Dosage in Persons Without Cancer (OHD)

Reduce the # of identified patients in participating pharmacies taking opioids ≥ 90 MME/day by $\geq 30\%$

Concurrent Use of Opioids and Benzodiazepines (COB)

Reduce the # of identified patients in participating pharmacies concomitantly using opioids & BZDs by $\geq 30\%$

Resources

WAYS TO TALK ABOUT SOCIAL DETERMINANTS OF HEALTH:

- Health starts—long before—in our homes, schools and jobs.
- All Americans should have the opportunity to make choices that allow them to live a long, healthy life regardless of their income, education or race.

WHY THESE WORK:

- They promote use of plain language and include visuals.
- They connect the problem to the solution.

PRESCRIBING OPIOIDS FOR CHRONIC PAIN

ADAPTED FROM CDC GUIDELINE
Opioids can provide short-term benefits for moderate to severe chronic pain (for adults 18+ with chronic pain 7-14 days, palliative, or end-of-life care).

BEFORE PRESCRIBING

- ASSESS PAIN & FUNCTION**
Use a validated pain scale. Example: FSD scale where if question scores (0= no improvement from baseline to 10 = best describes your pain) (0 = no pain; 10 = "worst you can imagine")
Q1: What number from 0 – 10 describes how, during the week with your PAINMENT (OF LIFE) 10 = not at all; 0 = with your GENERAL ACTIVITY (0 = not at all; 10 = with your GENERAL ACTIVITY) (0 = not at all; 10 = with your GENERAL ACTIVITY)
- CONSIDER IF NON-OPIOID THERAPIES ARE APPROPRIATE**
Such as: NSAIDs, TCAs, SNRIs, anti-convulsants, acetaminophen, cognitive behavioral therapy.
Set realistic goals for pain and function based on diagnosis. Discuss benefits, side effects, and risks (e.g., addiction, overdose).
Check for contraindications.
Check for drug interactions.
- TALK TO PATIENTS ABOUT TREATMENT PLAN**
Set realistic goals for pain and function based on diagnosis. Discuss benefits, side effects, and risks (e.g., addiction, overdose).
Check for contraindications.
Check for drug interactions.
- EVALUATE RISK OF HARM OR MISUSE**
Known risk factors: Alcohol, drug use, mental health issues, history of substance use, co-occurring disorders, sleep-disordered breathing, prescription drug dependence program, data if available for repeated use of benzodiazepines from other sources.

OPPIOID MEDICATION FOR CHRONIC PAIN AGREEMENT

This is an agreement between the patient and the prescriber. It is not a contract. It is a statement of understanding between the patient and the prescriber. It is not a contract. It is a statement of understanding between the patient and the prescriber.

OPPIOID TAPERING FLOW SHEET

START HERE

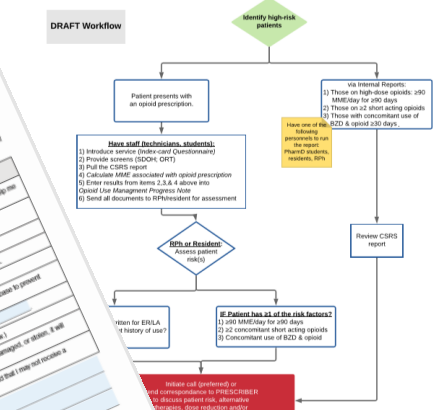

- Consider tapering for patients with opioid MED + benzodiazepine or medication + 10 mg or more daily benzodiazepine.
- Frame the conversation around tapering as a safety issue.
- Determine rate of taper based on degree of risk.
- Interventions to begin and end a reasonable date for completion. Provide information to the patient and establish behavioral supports prior to instituting the taper. See OPG guidelines.

OPPIOID TAPER

- Use an HMO calculator to help plan your tapering strategy. Medication tapering is generally a slower process and requires more frequent follow-up than tapering with a non-opioid pain reliever.
- Use an HMO calculator to help plan your tapering strategy. Medication tapering is generally a slower process and requires more frequent follow-up than tapering with a non-opioid pain reliever.
- Use an HMO calculator to help plan your tapering strategy. Medication tapering is generally a slower process and requires more frequent follow-up than tapering with a non-opioid pain reliever.
- Use an HMO calculator to help plan your tapering strategy. Medication tapering is generally a slower process and requires more frequent follow-up than tapering with a non-opioid pain reliever.

MED for Selected Opioids

Opioid	Approximate Equivalence Dose (oral and immediate release)	Half-life (hrs)	Dose Equivalent
Hydrocodone	50mg	3-6	25mg
Hydrocodone/acetaminophen	12 mg/325mg/4hr	3-6	10mg
Oxycodone	50mg	3-6	25mg
Oxycodone/acetaminophen	7.5mg	3-6	10mg
Oxycodone	50mg	3-6	25mg
Oxycodone/acetaminophen	7.5mg	3-6	10mg
Oxycodone	50mg	3-6	25mg
Oxycodone/acetaminophen	7.5mg	3-6	10mg
Oxycodone	50mg	3-6	25mg
Oxycodone/acetaminophen	7.5mg	3-6	10mg
Oxycodone	50mg	3-6	25mg
Oxycodone/acetaminophen	7.5mg	3-6	10mg

Benzodiazepine Tapering Flow Sheet

START HERE

- Consider benzodiazepine taper for patients with aberrant behaviors, behavioral risk factors, impairment, or concurrent opioid use.
- Frame the conversation around tapering as a safety issue.
- Determine rate of taper based on degree of risk.
- Interventions to begin and end a reasonable date for completion. Provide information to the patient and establish behavioral supports prior to instituting the taper. See OPG guidelines.

BENZODIAZEPINE TAPER

Basic principle: Expect anxiety, insomnia, and resistance. Patient education and support will be critical. Risk of seizures with abrupt withdrawal increases with higher doses. The slower the taper, the better tolerated.

CONSIDER TAPERING

- Calculate total daily dose. Switch from short-acting agent (alprazolam, lorazepam) to longer-acting agent (clonazepam, diazepam, or phenobarbital). Upon initiation of taper, reduce the calculated dose by 25-50% to adjust for possible metabolic variance.
- Schedule first follow-up visit two to four days after initiating taper to determine if adjustment in taper calculated dose is needed.
- Reduce the total daily dose by 5-10% per week in divided doses.
- After 1% to 1.5% of the dose is reached, you can slow the taper with cooperative patient.
- With cooperative patients who are having difficulty with this taper regimen, you can extend the total time of reduction to as much as six months.
- Consider adjunctive agents to help with symptoms: anxiolytic, hypnotic, antidepressant, neuroleptic, anti-depressant, clonidine, and alpha-blocker agents.

Benzodiazepine Equivalency Chart

Drug	Half-life (hrs)	Dose Equivalent
Chlordiazepoxide (Librium)	20-50h	25mg
Diazepam (Valium)	20-50h	10mg
Alprazolam (Xanax)	6-20h	0.5mg
Clonazepam (Klonopin)	10-20h	0.5mg
Lorazepam (Ativan)	10-20h	1mg
Oxazepam (Serax)	3-21h	15mg
Triazolam (Halcion)	1.6-5.5h	0.5mg
Phenobarbital (Luminal)	55-115h	30mg

North Carolina State Health Director's Standing Order for Naloxone

PREVENT & PROTECT

GUIDE FOR PHARMACISTS DISPENSING NALOXONE TO PATIENTS

Easy to use instructions for dispensing naloxone to patients

Types of Naloxone

Medication	Quantity	Notes
MULTI-DOSE NASAL SPRAY	QUANTITY: 2 doses	1. Naloxone HCl 2mg/0.5mL (0.5mL/0.5mL)
INJECTOR	QUANTITY: 2 doses	1. Naloxone HCl 2mg/0.5mL (0.5mL/0.5mL)
INJECTOR	QUANTITY: 2 doses	1. Naloxone HCl 2mg/0.5mL (0.5mL/0.5mL)

FOR DISPENSING

1. Assess patient risk factors.
2. Educate patient on overdose signs and symptoms.
3. Provide patient with naloxone and instructions for use.
4. Document patient education and naloxone dispensing.

LET'S TALK ABOUT NALOXONE - IT SAVES LIVES

Pharmacists are well-positioned to generate opioid safety education and naloxone dispensing. This is a critical role in the fight against opioid overdose.

OPPIOID EMERGENCY ACTION PLAN

Accidental opioid overdoses can cause life-threatening breathing problems. Know the signs and symptoms of an opioid emergency and have a plan in place to prevent and respond to one. Know the instructions for preparing and using naloxone so when someone is in danger, you can act fast.

EMERGENCY ACTION STEPS

1. Administer Naloxone
2. Repeat dose every 2-3 minutes as needed
3. Call 911
4. Call Emergency Contact(s)

Patient Name:	DOB:
Date of Review:	Pharmacist Name:
Reason for Review: Chronic Pain Management	

Dear [Provider],

My name is [Name], and I'm a Pharmacist at [Employer]. In an effort to improve the safety of our patients taking opioid therapy, we have completed a pain management assessment and have identified the following patient as high-risk. Below are recommendations regarding potential medication issues you may find helpful as you continue to provide care for the patient.

Factors Affecting Risk Include:

<input type="checkbox"/> High dose opioid therapy <input type="checkbox"/> Taking extended release or long acting opioid(s) <input type="checkbox"/> ≥ 2 short-acting opioids simultaneously	<input type="checkbox"/> Simultaneous opioid and benzodiazepine use <input type="checkbox"/> Comorbidities _____ <input type="checkbox"/> Other _____
--	---

Provider Action Required:

Taper Opioid with Intent to D/C Reduce Opioid Dose to Improve Safety Switch to Non-Opioid Analgesic

Recommended Provider Action:

Provider Comment:

Taper BZD with Intent to D/C Adjust Dose of Current BZD to Improve Safety

Recommended Provider Action:

Provider Comment:

Requires Assistance with Social Determinant(s) of Health Needs

Recommended Provider Action: Refer to case management or resources to address the following needs:

Food Housing Transportation Interpersonal Safety

Provider Comment:

Pharmacist Action(s) Performed:

- Provided Naloxone via Standing Order
- Provided Recommendation for Bowel Regimen
- Initiated Pharmacy Pain Agreement
- Positive Screen for Social Determinants of Health
- Referred to NCCARES360 for social determinant of health needs: Food Housing Transportation Interpersonal Safety

In the event your response includes new or changed prescriptions, please communicate this directly to the patient and our pharmacy so we may help reinforce the patients plan of care.

CDC Quality Improvement and Coordinated Care Project: Safe Opioid Prescribing in Rural NC

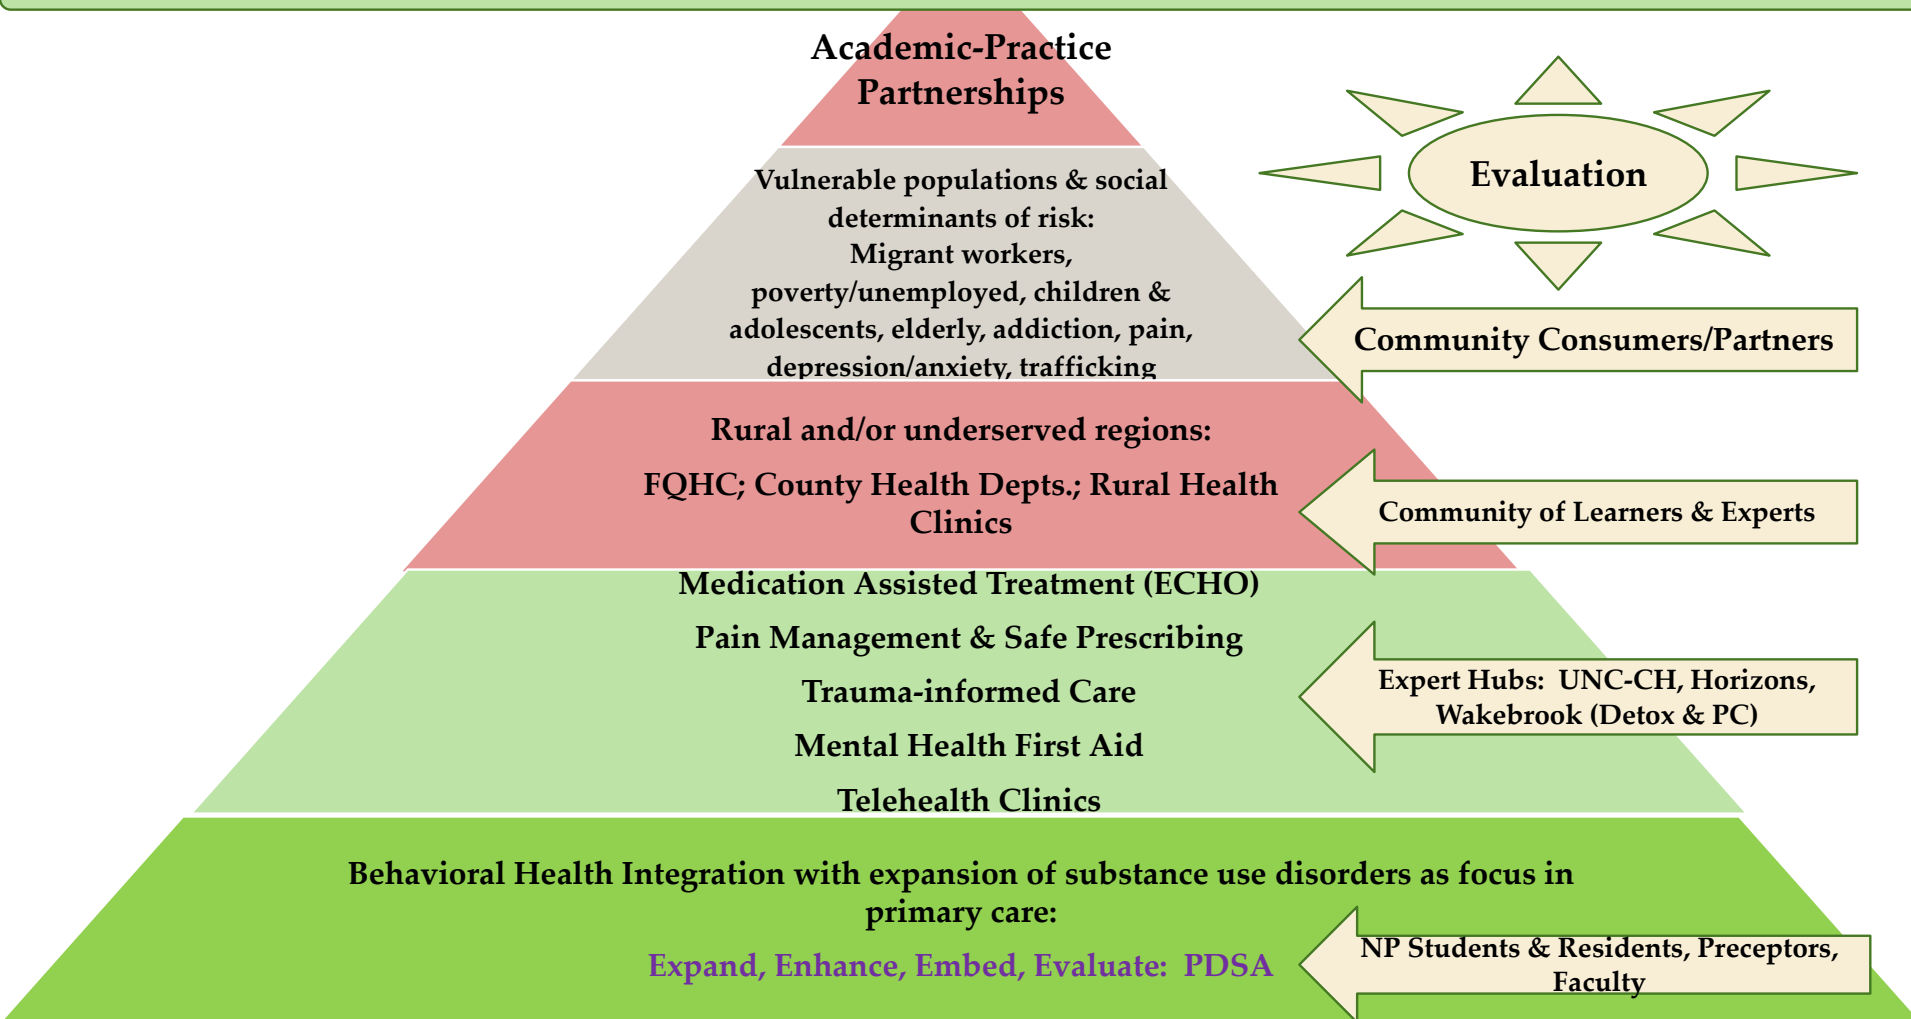

Victoria Soltis-Jarrett

Context of the problem: 2005-present

- Shortage of health care providers in rural NC
- Lack of access to Behavioral Health and Substance Use Services in rural NC
- Barriers to practice
- Burden of illness faced by the target population
- Opioid crisis in NC

13.5 million dollars in funding to expand, enhance and educate: 2005-present

Building blocks for the UNC-Chapel Hill School of Nursing Grants

PMHNP Program was the first in NC: Robust & Sustainable in 2020

Basic assumptions after 15 years: The “Whys”

- 50% of psychiatrists in NC will retire in the next 2-3 years
- There are still gaps in services and access to mental health agencies
- FOCUS NOW: **RURAL** Primary Care
 - Lack of education and training of the current workforce impacts on the referrals to the Mental Health sector
 - Limited professional healthcare graduate education
 - Opioid crisis, STOP ACT and NC Opioid Action Plan

Purpose: Governor's Institute Project & UNC HRSA Grants

- HRSA Grants:
- To expand, enhance and educate NP students, NP Residents, Primary Care Providers and Staff to become more proficient to provide Behavioral Health and Substance Use Assessment & Management in RURAL NC

- GI Project: (Using the CDC QI Guidelines)
- Increase screening, assessment (SBIRT)
- Provide safe and effective treatments for chronic pain
- Learn how to “de-prescribe” safely and with evidenced based clinical practice

Centers for Disease Control and Prevention. *Quality Improvement and Care Coordination: Implementing the CDC Guideline for Prescribing Opioids for Chronic Pain*. 2018. National Center for Injury Prevention and Control, Division of Unintentional Injury Prevention, Atlanta, GA.

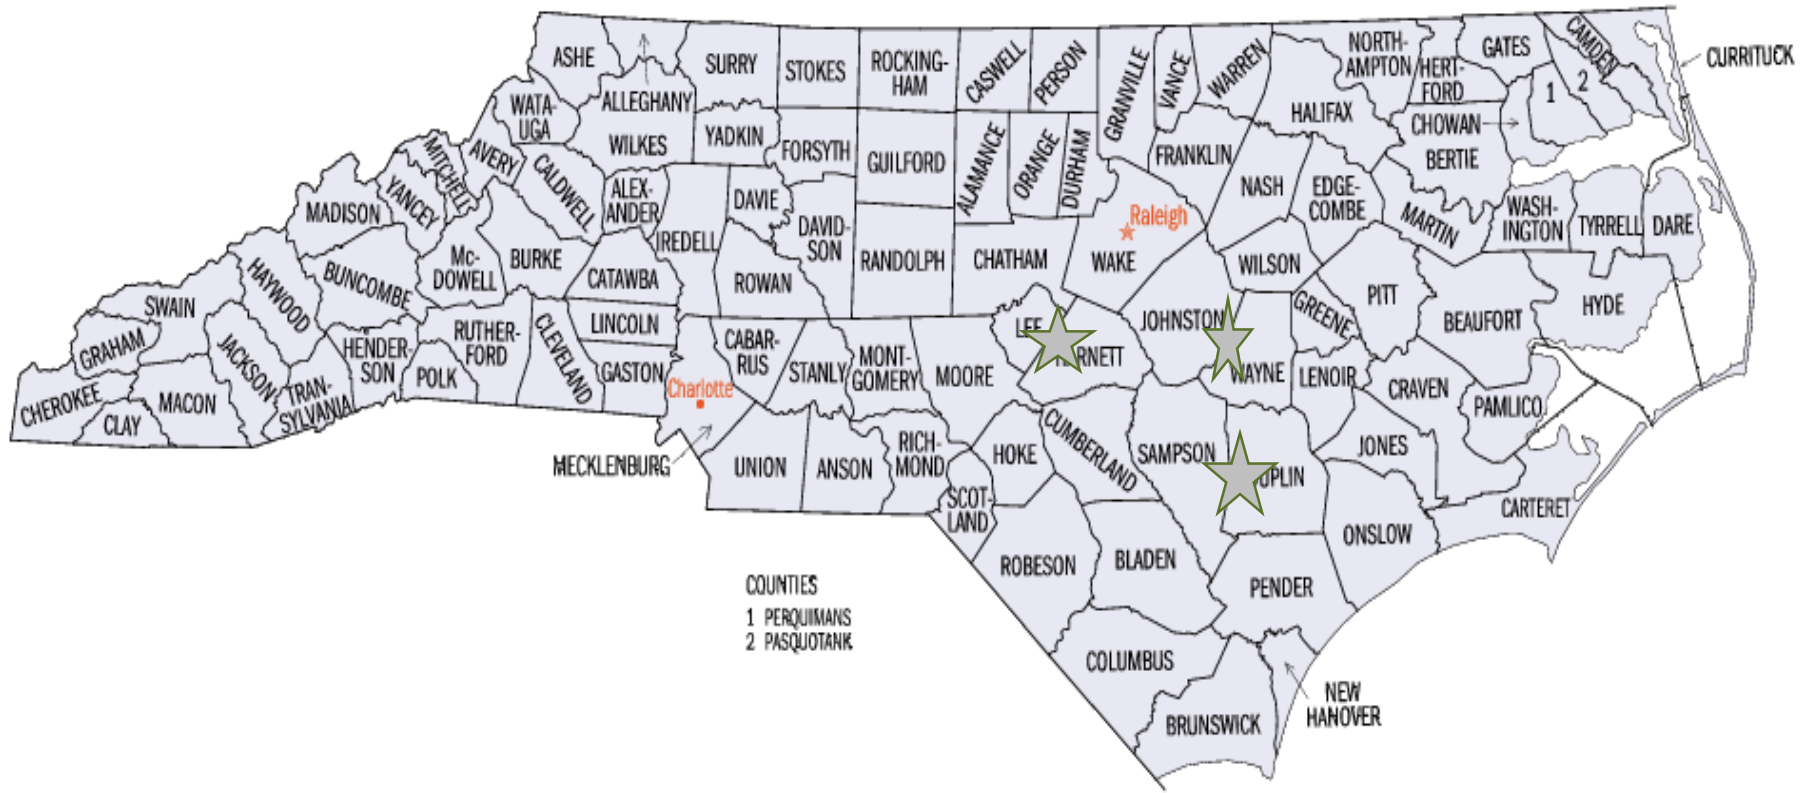

Basic Principles: Care, Share & Be Fair

- **Care** for all individuals regardless of their diagnoses
- **Share** resources and funding
- **Respect** everyone for what they can offer

AIMS of GI Project

1. Identify at least three (3) primary care centers clinics in the Academic-Practice network and implement CDC's Quality Improvement and Implementation Guide
2. Work with sites to select and prioritize which recommendations to implement within the first year.
3. Work with sites to define goals and develop plans to implement and monitor progress.
4. Develop practice level strategies and policies for coordination of care.
5. Develop system for tracking patients and quality improvement measures.

Academic-Practice Partnership Sites Identified through Need

Practice Level Strategies

Use an interprofessional team-based approach

- Using a team-based approach across multiple disciplines and specialties improves the management and coordination of care.

Establish opioid policies and standards

- Developing and implementing practice-wide policies or standards to support and encourage consistent long-term opioid therapy management and coordination.

Use EHR data to develop patient registries and track QI measures

- EHRs are critical sources of information for managing and monitoring implementation by care teams and registries are useful to identify patients to target for specific interventions and care coordination.

Outcome Measures

1. Number of opioid and benzodiazepine prescriptions* written *in CDC QI project sites* at baseline, 6 months, and 11 months
2. Number of individuals screened for SUD at CDC QI project sites
3. Number of providers and staff trained in SBIRT, Safe Opioid Prescribing
4. Update policies and clinical pathways for each site

*Benzodiazepines in combination with opioids

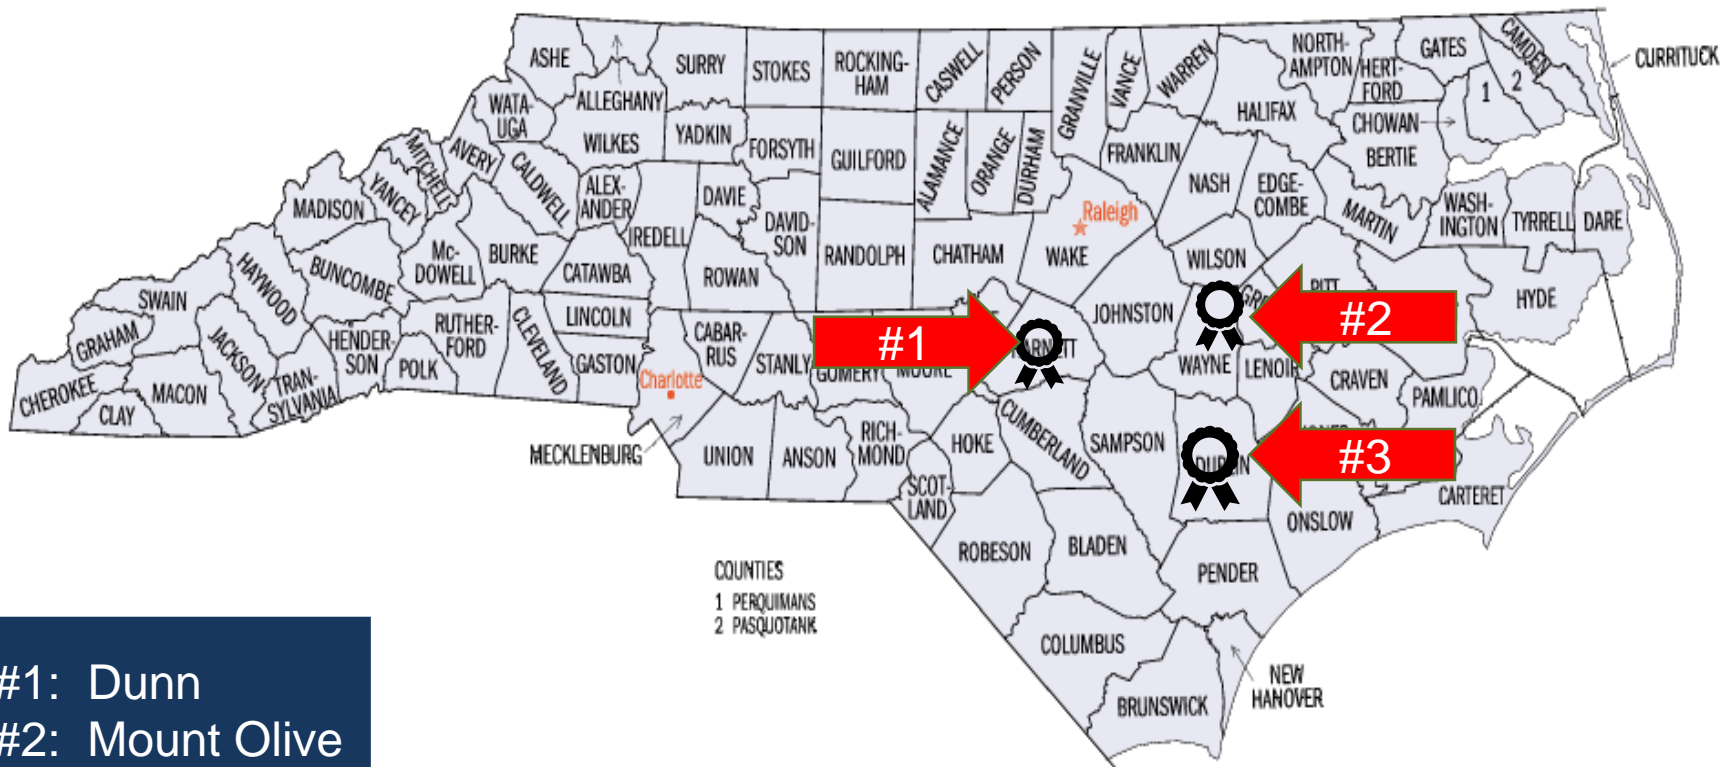

First Quarter Outcomes

1. Identify at least three (3) primary care centers clinics in the Academic-Practice network and implement CDC's Quality Improvement and Implementation Guide
 - Have two sites engaged; third just identified
 - Several others have expressed interest
 - Each with an NP that will be Champion (Training started)

2. Met with agency wide QI Committee, Medical Director, Key Staff

3. Work with sites to select and prioritize which recommendations to implement
 - Screening tools identified
 - Baseline measures identified
 - Training of staff, Site Leaders and Champions scheduled
 - EMR requests made for baseline values

NPs Leading the Way: NP Champions

- #1: Dunn
- #2: Mount Olive
- #3: Wallace

Questions?

Increasing Workforce Capacity for MAT Through Residency and Advanced Practice Programs

Blake Fagan & Shuchin Shukla

MAT Training Project - Year 1

North Carolina Department of Health and Human Services - Division of Public Health - Injury and Violence Prevention Branch (IVPB)

OUR AIM

Increase the number of healthcare providers across the state who are trained in medication-assisted treatment (MAT)

OUR METHODS

Train faculty, medical residents, physician assistants, nurse practitioners, students, and staff

Four courses were offered:

- MAT Waiver
- MAT 101
- Recovery Within Reach:
Treating Substance Use Disorders/
Addiction as a Chronic Illness
A how-to training on providing opioid use disorder treatment through an integrated care team approach
- Train-the-Trainer event to incorporate MAT into curricula

Evidence-based technical assistance was provided:

- Shadowing at MAHEC Family Health Center
- Coaching with MAHEC's integrated multidisciplinary team
- MAT Policies, Procedures & Resources Toolkit
- UNC Project ECHO® for MAT
(A UNC and MAHEC collaboration)

ECHO is led by an expert team that uses multi-point videoconferencing to conduct virtual learning sessions comprised of a short didactic followed by case presentations provided by participants.

OUR REACH ACROSS THE STATE

Training Participant Distribution

OUR ACHIEVEMENTS

The Project trained providers in:

- 30 residencies — Family Medicine
Internal Medicine
Emergency Medicine
Obstetrics & Gynecology
Psychiatry
Pediatrics
Urology
- and these specialties — Palliative Care
Sports Medicine
Infectious Disease
Preventive Medicine
Hospital Medicine
Pharmacy
Dermatology
Surgery
- 6 Physician Assistant programs
- 1 Nurse Practitioner program

- Total number of providers trained **1,512**
- 63 MAT faculty champions established across the state
Local leaders guiding MAT efforts in their regions

Course participation by provider:

	MAT Waiver	Recovery Within Reach	MAT 101	Total
Faculty	192	9	64	265
Residents	472	35	174	681
PA	26	0	9	35
NP	9	0	3	12
Students	137	0	152	289
Other	66	105	12	183
Training w/o Disaggregated Data Available	0	0	47	47
Total	902	149	461	1512

OUR REACH ACROSS RESIDENCIES & PROFESSIONAL PROGRAMS

Medication-Assisted Treatment Training Project Year 2

November 2019 - August 2020

IMPACT REPORT - JANUARY 2020

Goal: Sustainably embed medication-assisted treatment (MAT) education into curricula

CE/CME/CNE TRAININGS

MAT 101

MAT Waiver

SUDs 101 for the Clinic Team

MAT 101+ Cases

**Train the Trainer:
PCSS MAT Waiver Training
for Prescriber Champions**

NEW PROGRAMS

Tapering Opioids for Chronic Pain

Treating Pain Safely

PILOT PROGRAMS

**Intersection: Promoting Equity in the
Management of Substance Use Disorders**

Non-Opioid Interventional Pain Management

Academic Detailing

Year 2 course participation by provider

TECHNICAL ASSISTANCE

To increase prescribing of buprenorphine in clinics on an ongoing basis

Shadowing at MAHEC Family Health Center

Coaching calls with MAHEC's integrated multidisciplinary team

MAT Policies, Procedures & Resources Toolkit

MAHEC's Project ECHO® for MAT

Mentorship via co-teaching

	PGY1	PGY2	PGY3
DIDACTICS	<p>Safe opioid prescribing (MAHEC, state, and federal level policies on opioid prescribing)  30 min.</p> <p>Opioid and benzodiazepine prescribing and tapering  1 hr. 30 min.</p> <p>Alcohol use disorder  45 min.</p> <p>Tobacco cessation and vaping  45 min.</p>	<p>Half and Half MAT Waiver Training 4 hours live and 4 hours online </p> <p>Opioid and benzodiazepine prescribing and tapering  1 hr. 30 min.</p> <p>Alcohol use disorder  45 min.</p> <p>Tobacco cessation and vaping  45 min.</p>	<p>Opioid and benzodiazepine prescribing and tapering  1 hr. 30 min.</p> <p>Alcohol use disorder  45 min.</p> <p>Tobacco cessation and vaping  45 min.</p>
ROTATIONS		<p>Integrated in behavioral health curriculum</p> <p>One week addiction-focused rotation</p>	<p>Integrated in behavioral health curriculum</p> <p>One week addiction-focused rotation if not completed in PGY2</p>
	Every resident could rotate through OBOT and chronic pain clinic (individual visits – intakes, follow-up)		

Additional options at MAHEC

After intern year, MAHEC pays for DEA licenses. *NOTE:* No additional cost for "X"

Hospital – Inpatient:

- Training of acute withdrawal of alcohol and benzodiazepine (current)
- Addiction service line (future)
- Developing Addiction Medicine fellowship (one year, starts July 2020)

Resources:

- MAT Policies, Procedures, and Resources Manual
- Society of Teachers of Family Medicine (STFM) addiction curriculum

Interdisciplinary team structure:

- Behavioral health (LCAS, LCSW, LPC)
- Peer support
- Pharmacy

Year 2 Participation by Provider Type

Intersection: Promoting Equity in the Management of Substance Use Disorders

Special focus on Medication-Assisted Treatment for Opioid Use Disorders

Didactic Objectives:

Define status of historically marginalized communities and their intersection with the health care system

Examine power, bias, stigma, privilege and analyze their impact on health and health care, especially in SUD treatment

Promote equitable and inclusive therapeutic alliances with patients with substance use disorder

Explain how the social determinants of health affect patients with substance use disorders

Debrief Objectives:

Explore how to operationalize equity in healthcare through allyship in practices, policies, and procedures

Increase and expand knowledge, intent to use, ability, and self-efficacy regarding equity in substance use disorder

Outcomes: Sustainability

Increase number of MAT providers who intentionally embed equity when treating people with substance use disorders

Improve acceptability and adoption of equitable practices at the macro clinical level

Foster capacity in incorporating equity into the curriculum

Develop and share blueprint of how to embed equity in the management of substance use disorders in the curriculum

Increase primary care workforce that implements equity in their clinical practice

Next Steps

- STFM- Addiction Curriculum
 - OUD module
 - Health Equity, Vulnerable Populations, and Addiction module
- Explore Project CARA extension
- Case Western: Racial Disparity, Social Justice and the Opioid Crisis Conference
 - Topic: Policy Change Across Institutions Achieving Healthcare Equity

Pilot: Academic Detailing

<p>Prescriber referred for Academic Detailing</p>	<p>Academic Detailing Team Provider Educator brings education materials to office</p>	<p>Detailing visit covers 2016 CDC Opioid Treatment Guidelines</p>	<p>Post-visit</p>	<p>Chart review evaluation</p>

20ME033 - Train the Trainer - PCSS MAT Waiver Training for Prescriber Champions

Apr 20–Apr 21, 2020 Medicine

Description

Prescriber champions are joining forces with MAHEC to engage in collective impact to resolve the opioid crisis. MAHEC is providing a training for prescribers at residency & training programs such as NP and PA schools to support the incorporation of MAT waiver training into their curriculum. As a first step to help champions become waiver trainers, MAHEC is offering a 2-day experiential train the trainer event. In addition, participants will learn trauma informed care and resiliency informed care models with a health equity approach to treatment and prevention.

BREAK

North Carolina Controlled Substances Reporting System (CSRS)

Stella Bailey

North Carolina Controlled Substances Reporting System

Collects information on prescriptions for controlled substance schedules 2-5

How it works

Authorized to receive data
Licensing Boards, Public Health, Law Enforcement

North Carolina Controlled Substances Reporting System

PDMPs collect information on who, what and when

Who?

- dispensed the controlled substance
- wrote the prescription for the controlled substance
- the prescription was for

What was dispensed?

- name of the drug and associated details (classification, schedule)
- strength of the drug
- number of days supplied
- Refill or not

When did all this happen?

- date prescription was written
- date prescription was filled
- date prescription was dispensed

North Carolina Controlled Substances Reporting System

1. Improve care

- Prescribers check a patient's prescribing history of controlled substances, encouraging prescriber to patient conversations about previous care and future decision making
- Pharmacists check a customer's history of dispensed controlled substances before dispensing, creating opportunities for a conversation about care

2. Reduce diversion

- Alerts system users to potential inappropriate use, so action can be taken to prevent harm due to the illicit circulation of controlled substances

Other Use of Data

Personal information

Individuals have the right to request a copy of their own controlled substances history
Details on how to apply are on our website

Public sources

Annual Report
North Carolina Opioid Action Plan

Statistical use: research

De-identified data only
Researcher's section of the website with application forms, data guide and frequently asked questions

Researcher Resources

Dedicated web-page with:

- Frequently asked questions;
- Application forms;
- Data guidelines; and
- Data dictionary

Division of Mental Health, Developmental Disabilities and Substance Abuse Services

North Carolina Department of Health and Human Resources,
Division of Mental Health - Drug Control Unit – Data Guidelines

SECTION I	INTRODUCTION
<p>CSRS data: no PII can ever be released except to authorized parties (i.e. NCMB, NCBon, SBI). Researchers can request de-identified data if their need is substantiated. There is a full definition of de-identified health information and a table of restricted/available CSRS variables below.</p> <p>Note on age: researchers cannot be provided with Date of Birth (DOB). Age group will be provided instead. For de-identified datasets, the variable is calculated based on the patients' ages on January 1 of that year. This is necessary because DOB could be calculated with age and the Filled_at variable. Any patients 80 years of age or older will be grouped as "80+."</p> <p>The CSRS data can be requested in the form of summary statistics or as a de-identified dataset.</p>	
SECTION II	SUMMARY STATISTICS
<p>1. SUMMARY STATISTICS: the most common type of request. Includes the count/sum of requested metrics (pills/prescriptions/MMEs) broken down by requested dimensions (year/county/drug/gender). This sort of table would be delivered in the format shown below.</p>	

Annual Report 2019

- County level trends
- Controlled Substances by schedule and class
- Number of controlled substances dispensed by age and gender
- Veterinary data available for the first time

Data sharing

§ 90-113.74. Confidentiality.

(a) Prescription information submitted to the Department is privileged and confidential, is not a public record pursuant to G.S. 132-1, is not subject to subpoena or discovery or any other use in civil proceedings, and except as otherwise provided below may only be used (i) for investigative or evidentiary purposes related to violations of State or federal law, (ii) for regulatory activities, or (iii) to inform medical records or clinical care. Except as otherwise provided by this section, prescription information shall not be disclosed or disseminated to any person or entity by any person or entity authorized to review prescription information.

Technology Update: 2018-2020

In 2018, DHHS moved to a new technology platform

AwarXe online portal (APPRISS Health)

Better access and functionality

Faster Response times

Integration to Electronic Health Records

Clinical tools

Connection to other states

Integration with Electronic Health Records (EHRs)

INTEGRATION REDUCES THE TIME TO CHECK THE CSRS FROM 4 MINUTES TO 3 SECONDS

REMOVES THE NEED FOR DELEGATED ACCESS AND CUMBERSOME ADMINISTRATIVE PROCESSES

INCLUDES CONNECTIONS TO OTHER STATE'S PDMPs

Gateway 2 Call Web Service

1

First Call (auto-generated)

The first call is triggered based on an automated event set by the healthcare facility. The purpose of the first call is to load scores and prefetch data for faster data downloads for the second call.

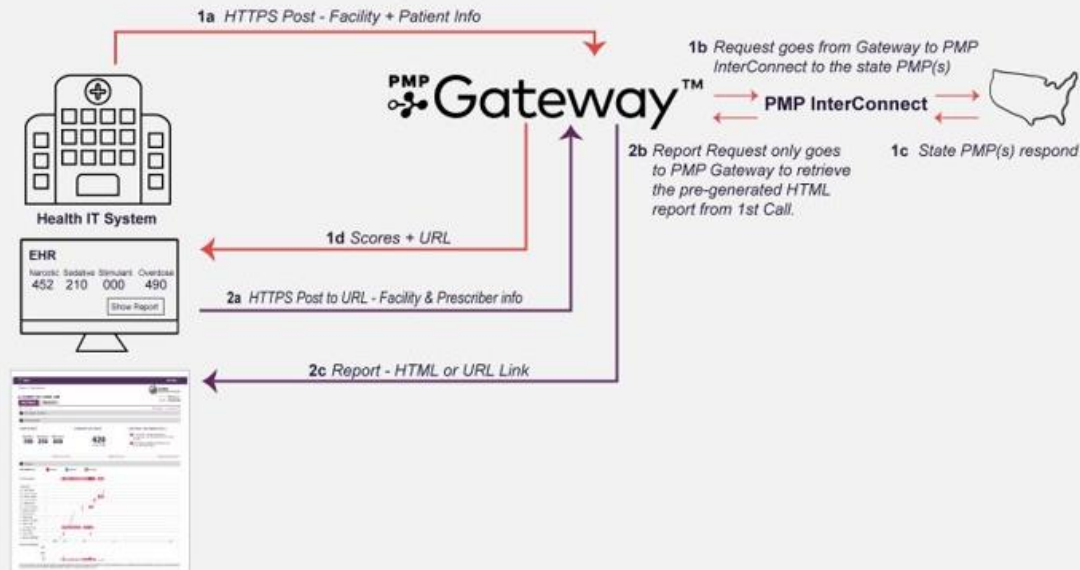

Steps: 1a, 1b, 1c & 1d

2

Second Call (manually generated)

The second call is manually initiated by a user at the healthcare facility.

Steps: 2a, 2b, & 2c

Interstate Connections

Searches multiple states to ensure accurate history is available

Source: pdmpworks.org

Clinical Tools

- NarxCare – is a clinical assessment tool to increase understanding of the interplay between the type and frequency of prescribed controlled substances to prevent substance misuse and reduce instances of unintended overdose
- It is to be used *together* with other information that the provider has on the patient to *assist* with decision making about treatment

Sample NarxCare Report

Source: APPRISS Health

How Common are High Scores?

1% OF PATIENTS
SCORE ABOVE 650

5% OF PATIENTS
SCORE ABOVE 500

75% OF PATIENTS
SCORE BELOW 200

What You Need to Know

PRESCRIPTION OPIOIDS: WHAT YOU NEED TO KNOW

Prescription opioids can be used to relieve moderate to severe pain and help with opioid addiction. However, they can also be addictive and can lead to overdose and death. This pamphlet provides information on how to use prescription opioids safely and what to do if you have a problem.

WHAT DO YOU NEED TO KNOW ABOUT OPIOIDS?

Prescription opioids are powerful pain relievers that can be addictive and can lead to overdose and death. They are also used to treat opioid addiction. This pamphlet provides information on how to use prescription opioids safely and what to do if you have a problem.

Patient Education on Opioids

better together.

Support /skill-building groups bring people who share a common experience together to talk. You'll get to connect with people who are going through similar struggles to share ideas, help one another, and learn new techniques to manage pain such as deep breathing.

close the loop.

Biofeedback may help you calm your mind and control your heart rate, blood pressure, and breathing rate—all things that can contribute to pain. Relaxing and releasing tension can help you feel better.

get moving.

Gentle exercises such as yoga or dancing can help decrease pain by improving your range of motion.

serve yourself.

Dietary changes and optimizing your nutrition can relieve pain in a number of ways. Some diets might reduce bad inflammation for conditions like arthritis, while a weight loss diet might help take some strain off of painful joints.

rub it in.

Massage can reduce stress and tension while improving circulation, letting you heal faster while helping you feel better. Massage can be especially helpful for chronic back and neck pain.

get online.

Discovering **internet resources** can help you to take your care into your own hands, as they allow you to educate yourself about your options. You may find online support networks especially therapeutic.

Three free printed patient materials available:

- Safe opioid storage and disposal
- Alternatives + complementary services for pain management
- Administering naloxone

Operation Medicine Drop

Shannon Bullock

Safe Kids North Carolina

operation medicine drop

Shannon Bullock

NC Department of Insurance
Office of State Fire Marshal
Director, Injury Prevention Section
Director, Safe Kids NC

What is Operation Medicine Drop (OMD)?

IT'S A DRUG TAKE BACK PROGRAM

- ❑ Housed within the NC DOI and Safe Kids NC
- ❑ Partners with DHHS, AG's Office, US-DEA, NC-SBI, Local Law Enforcement, Fire Departments and Senior Centers.
- ❑ OMD provides education, assistance and support to NC communities to help in the proper disposal of prescription and over-the-counter medications.

Why is the OMD Program Important?

- ❑ 4 people each day die from an overdose
- ❑ More than car crashes
- ❑ Since 1999, over a 350% increase of overdoses

**Since the program began
2010.....**

- ❑ Over 3,600 Take-back events
- ❑ 475 Permanent Drop Boxes

**The Results:
OVER 206
MILLION
PILLS!**

The Newly Revamped OMD Website

- ❑ User-friendly interface with updated graphics, searchable fields and google maps option for exact directions
- ❑ Easier access for consumers to locate take-back events
- ❑ Enhanced for mobile applications from all devices

 Mike Causey, Commissioner

operation medicine drop

Is your medicine cabinet crowded with unused or expired medications? Do you know there is a safe, free and convenient way to dispose of your over-the-counter and prescription medicines – no questions asked?

Operation Medicine Drop is a partnership between law enforcement, health and safety advocates, substance abuse prevention professionals, environmental agencies and other organizations working together to provide N.C. communities a safe way to dispose of expired, unused over-the-counter and prescription medications.

Safe disposal of medications eliminates the risk of potentially dangerous drugs getting into the hands of children or teens and protects our environment, lakes, rivers and streams from contamination.

Safe Kids North Carolina and its partners have established more than 465 permanent medication collection sites (most of which are open seven days a week) and host statewide OMD Take-Back events twice a year.

protect communities
 If a guest in your home put a few pills in their pocket, would you know? Each year in our state, there are more than 1,300 deaths and over 20,000 ER visits due to overdoses. This represents a 250% increase since 1999, with almost half of them involving prescription opioids. In 2016, for the first time, unintentional poisoning was the leading cause of injury death to North Carolinians.

protect kids
 Are all the medicines in your home stored safely? According to a report by Safe Kids Worldwide, each year more than 60,000 children age 5 and under are treated in emergency rooms throughout the U.S. due to accidental medication exposure or overdose. In almost all of these visits, a child got into medicines while the parent or caregiver wasn't looking.

protect waters
 As you drink water from the tap, are you taking someone else's medications? Trace levels of prescription drugs and over-the-counter medicines have been found in rivers, lakes and in some community drinking water supplies. This is a concern among scientists due to the possible long-term consequences to human health.

(888) 347-3737 NC Department of Insurance • Mike Causey, Commissioner

How Can You Help?

Operation Medicine Drop's Spring Campaign begins March 15th and runs through April 25th

- Hold an OMD Take-back Event
- Promote the Operation Medicine Drop Campaign and PDB Locations

To hold an event:

Go to meddrop.ncdoi.com to register your event

Approved events receive Free Promo Items

We cannot do it without YOU!

SAFELY dispose of unused medicines.

Creating Virtual Opioid Based Practices

Franklin Walker

MAT Ecosystem

Overview of Project OBOT NC

Project Office-Based Opioid Treatment (OBOT) in North Carolina is a program developed by the North Carolina Medical Society Foundation. The Foundation's overall mission is to improve and increase access to healthcare for all North Carolinians.

Coalition Partners

- **NCMSF** - Creator and coordinator of Project OBOT
- **Health Departments & FQHCs** - Physical location for initiation of MAT, along with clinical resources
- **NC Medical Board** - protects the people of North Carolina, and the integrity of the medical profession through just licensing and regulation
- **UNC School of Public Health** - Pilot design and statistical analysis
- **Project Echo** - Provides training in opioid addiction treatment at no cost
- **MAHEC** - Provides training to residents in delivery of MAT
- **Governor's Institute** - Developing a comprehensive approach to improve how the health care professions prevent, identify, and treat substance use disorders
- **Pharmacy Collaborative (CPESN)** - community pharmacies offering personalized services and discounted medication to pilot participants

Can't train our way out of this!

Why Providers don't practice MAT

- Inadequate reimbursement
- Overly burdensome practice compliance requirements
- OUD patient demographics that were not consistent with their practice
- Inadequate mental health training
- Stigma associated with the practice of selling prescriptions (pill mills)

Provider Type	Data Waiver Patient Level			Totals
	30	100	275	
MD/DO	770	229	155	1154
NP	238	49		287
PA	101	28		129
Totals	1109	306	155	1570

2018 Data

Getting More Providers to Practice MAT?

Join Project OBOT's Virtual Practice Network

- Reduces administrative burdens by leveraging technology
- Offers a virtual option to their practice
- Provides a behavioral health care team with a collaborative care model
- Reimburses a fair rate without having to submit claims
- Stream-lines the charting process to increase efficiency
- Provides clinical decision support to assist providers in analyzing data.

Project OBOT Network Management

+

Recovery Platform

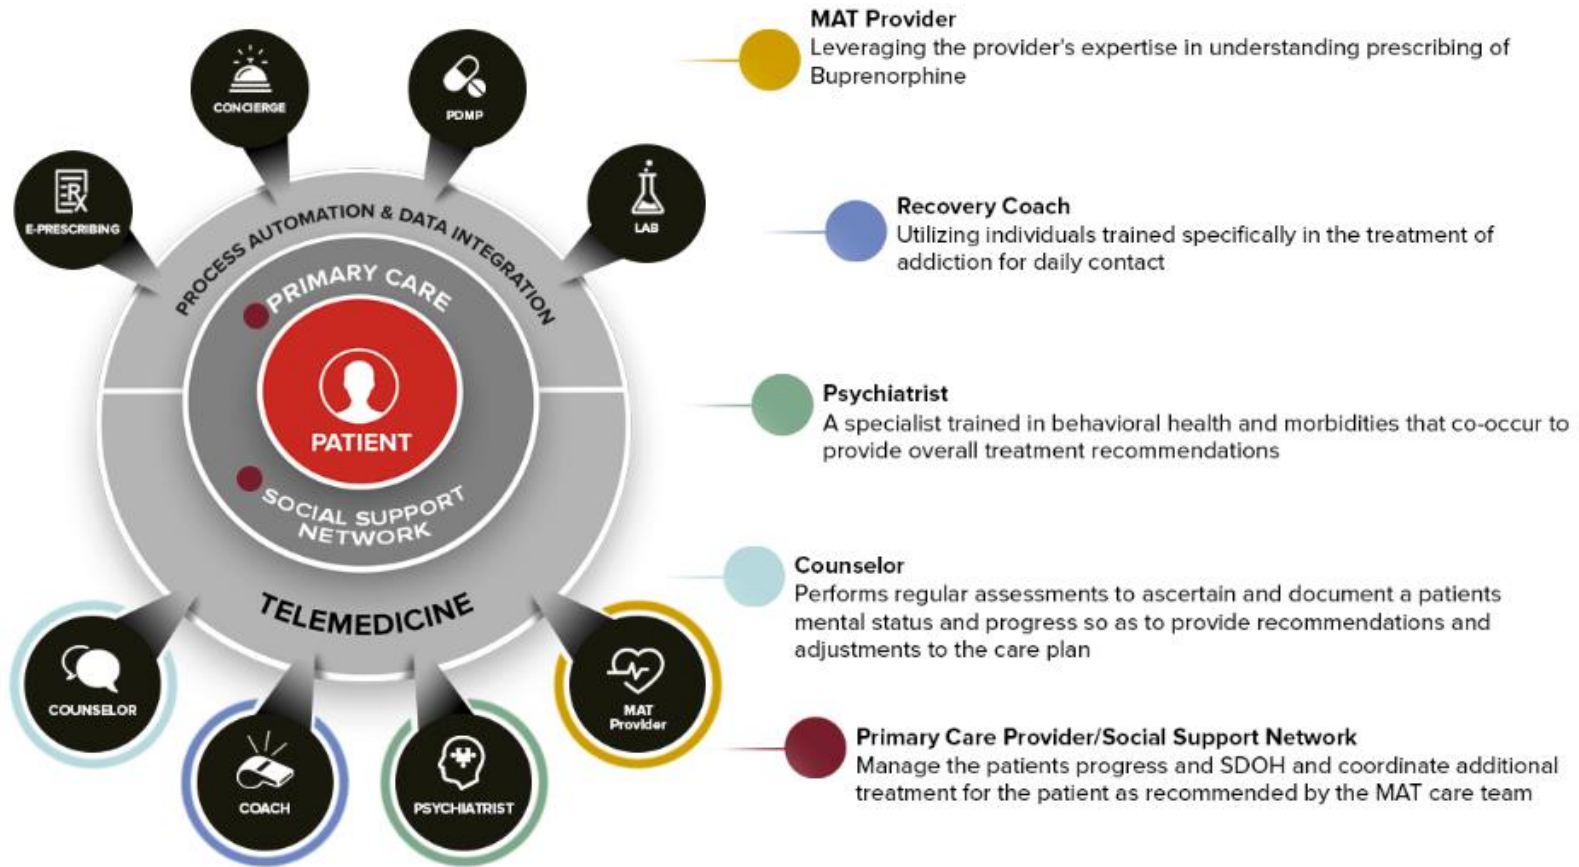

= ****

We create and manage clinically integrated networks of physical and behavioral health providers to provide quality MAT for OUD in a cost-effective manner.

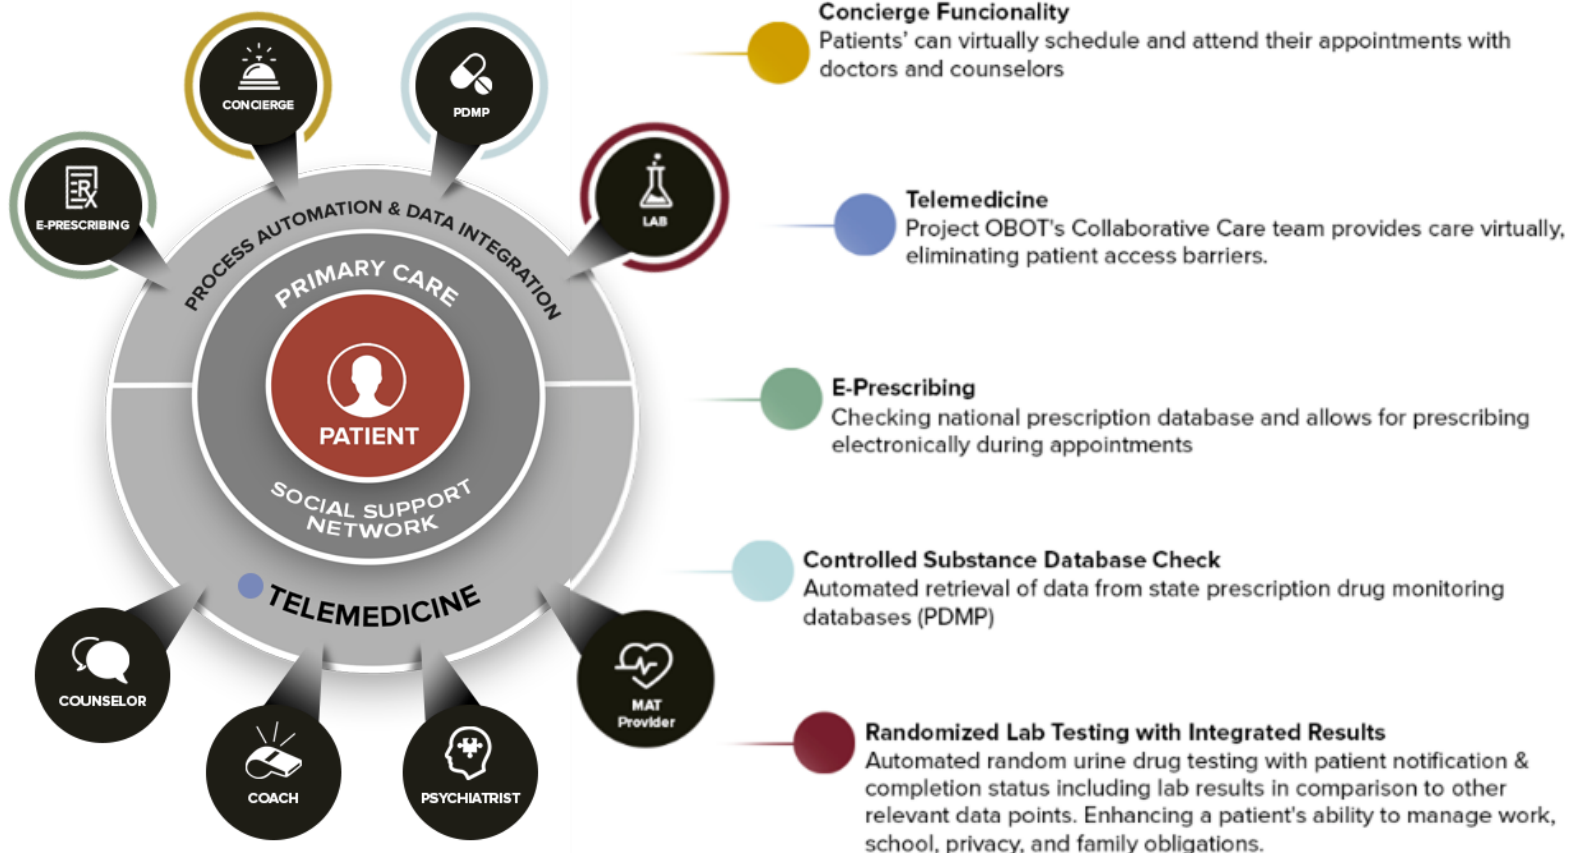

We are a technology platform built for treatment of OUD in a Collaborative Care model. Our solution enables providers to meet SAMHSA treatment guidelines in a scalable manner through automation and efficient user experiences

Implementing a Collaborative Care Model

Using Technology to Create Efficiency

Pilot Data

Our enrollment:

- Nearly **25%** of program participants have overdosed at least once.
- More than **75%** of patients began drug use before the age of 25 while 26.7% use IV needles for their drugs and 62.2% take drugs orally
- **66%** of participants were unemployed
- **56.5%** of participants either have a criminal record or are currently justice involved.
- **64.3%** were concerned about their health and **37.8%** indicated they have had medical issues related to their OUD
- Roughly **90%** indicated they had a smartphone and reliable access to Internet for the use of telemedicine

Pilot Data

Our Outcomes at 6 months:

- Patient engagement - **84.21%** for counseling and **93.06%** for coaching.
- **40%** of participants in the pilot had been in active recovery for less than one month
- **100%** retention rate for participants (with the exception of an individual who became incarcerated).
- **70%** had previously tried another program that did not work for them.
- Automated PDMP searches indicated **0%** seeking behavior during their treatment period
- **78%** of patients were found to have completely discontinued use of opiates or illicit drugs due to randomized Lab screens.
- **84%** of patients showed improvement based on COWS
- **71%** showed improvement in multiple areas of the BAM score.

*Only **1 patient** continued to show moderate issues related to withdrawal*

Establishing a VBOT Program

- Build a state-wide web of enrollment locations (brick & mortar)
- Retain experienced addiction professionals to assign care teams and perform routine behavioral health assessments
- Recruit a network of “virtual” MAT providers and psychiatrists
- Establish a grid of lab collection centers to perform a standardized MAT screening panel
- Identify a chain of community pharmacies
- Leverage technology to:
 - Improve clinician efficiency
 - Provide clinical decision support features
 - Increase communication and engagement with members
 - Allow for members to self-schedule
 - Enable virtual appointments
 - Manage service utilization and quality

Services Financial Breakdown

Ongoing Clinical Services

- Prescribing Provider 20%
- Behavioral Health Assessment 5%
- Mgmt Fee 15%
- VBOT Services 60%

\$600 - \$750 per patient per month
(\$750 - \$1500 for initial month)

VBOT Services

- Recovery Coaching
- Psychiatric Chart Reviews
- Toxicology Services
- Medications
- Utilization Management
- Clinical and Reporting Software
