Explanation re: 2 different JYNNEOS standing order templates:

In NC, only licensed physicians, nurse practitioners and physicians' assistants are allowed to make medical decisions regarding care and treatment of patients. The decision as to whether a patient receives JYNNEOS either intradermally or subcutaneously based on agency policy is a medical decision made by the medical director of the agency. Therefore, to alleviate any concern regarding scope of practice breaches, two separate standing order templates were created. Administration of JYNNEOS by the route the patient selects is not a medical decision, but a patient preference for the route of the vaccine since the vaccine may be given by different routes.
